PROFILE

I'm an undergraduate student studying Information Technology and Psychology & Counselling. I enjoy working with people and have strong communication, teamwork, and problem-solving skills. I'm looking to build experience in coordination or administrative roles, as well as apply my IT knowledge in real industry settings, while contributing to a team's success."

EDUCATION

Higher National Diploma in Information Technology (HNDIT)
Sri Lanka Institute of Advanced Technological Education – Kegalle
2024 – Present

Degree in Psychology & Counselling
IMBS Green Campus
2025 – Present

Diploma in Psychology and Counselling
IMBS Green Campus
2024 – 2025

WORK EXPERIENCE

Intern – Social Services Department
Warakapala Divisional Secretariat
September 2025 – November 2025 (2 Months)

Completed a two-month internship at the Social Services Department, gaining hands-on exposure to community welfare services, case coordination, and administrative support within a government divisional secretariat setting. Applied psychology and counselling knowledge in a real-world social service environment while strengthening communication and organizational skills.

CERTIFICATIONS

- Diploma in Psychology and Counselling – IMBS Green Campus (2025)

ACADEMIC PROJECTS

E-Commerce Management System
Developed a full-stack e-commerce web application using React.js and Laravel with MySQL database integration. The system includes features such as user authentication, product management, shopping cart functionality, order management, and Stripe payment integration. The project was designed with a responsive user interface using Bootstrap and REST API communication between frontend and backend systems.

Smart Boarding Management System
Developed a Smart Boarding Management System using React.js, PHP, and MySQL database technologies. The system was designed to manage boarding house operations efficiently, including student registration, room allocation, payment management, and boarding details management. The project focused on improving administrative efficiency, data management, and user accessibility through a responsive web-based platform.

Learning Management System (LMS)
Developed a Learning Management System (LMS) using HTML, CSS, JavaScript, and PHP for educational management and student interaction. The system was designed to allow only registered students to access the platform securely using their registration

number and login credentials. Key features include publishing notices and announcements, uploading and downloading learning materials, assignment submission functionality, exam result publishing, and personalized student result viewing.
